PREFACE

This Mission Coverage Index (MCI) lists the intelligence targets imaged on the photography of this mission. Items in the MCI are arranged in three sections:

Section I provides short descriptions for newly identified targets and previously reported targets showing changes, and also provides order of battle information.

Section II provides a listing of those targets which reflect no apparent change in facilities from the most adequate previous description. The MCI in which this description appears is designated by the appropriate mission number, prefixed by the letters "NAC" and appearing as the last entry on the photo reference line. Military installations where there is no significant change in facilities and where no order of battle can be determined are listed under this section.

Section III provides a listing of those targets which could be identified but not interpreted.

Targets in each of the three sections are arranged 1)

by country, 2) within the country according to subject, 3) within the subject by WAC area, and 4) within the WAC area by geographic coordinates in ascending order. An explanation of column headings and photo reference data used in presenting the information is contained in the appendix. The map base used (when available) for the derivation of coordinates in this MCI is the latest edition of the US Air Target Chart, Series 200.

For the convenience of the user, an index to all targets is included following Section III. Targets in the index are arranged alphabetically within a country.

The user of this MCI is cautioned that the scan of photography was accomplished in a relatively short time and often without the aid of precise analytical and mensural techniques commonly employed in detailed photographic analysis. Consequently, although the information presented herein is essentially accurate, additional, detailed analysis may somewhat alter portions of the information.

MENSURATION LIMITATIONS

All measurements contained in this report are the best obtainable within the current limits of the KH-7 system and exploitation techniques. There being no means in the system for determining camera attitude, precise attitude is unknown

and planned attitude is assumed. A full analysis of the metric characteristics of strip camera photography has not been completed. Wherever possible, measurements have been cross-checked with collateral information.

MISSION HIGHLIGHTS

Mission 4006, utilizing the KH-7 Camera System, was accomplished during the period 12-14 March 1964 and provided [] over the Sino-Soviet Bloc, the Middle East, Africa, Indonesia, and the Tuamotu Archipelago.

Missile activity newly identified on Mission 4006 includes:

SAM				
SA-1	SA-2	SA-3	SA-4	Support
2				2

Other activity newly identified on Mission 4006 includes:

ELECTRONICS	
Location	Type
Zhigansk	TALL KING radar
Dikson Island	TALL KING radar
Mys Shmidt	TALL KING radar
Naryan-Mar	TALL KING radar

Order of battle information of special interest includes:

AIRCRAFT	
Location	Type
Baranovichi Airfield	8 BLINDER
Chepelevka Airfield	22 FARMER FITTER

AIRCRAFT (Continued)

Location	Type
Engels Airfield	18 FITTER 2 possible FIREBAR
Siauliai Airfield	3 probable MANDRAKE 34 FISHBED
Ussuriysk Vozdvizhenka Airfield	16 FITTER
Novosibirsk Airfield Northeast	16 FISHBED
Melitopol Airfield	2 FLASHLIGHT FIREBAR

NAVAL ACTIVITY

Location	Vessel Type	Firm	Probable	Possible
Petropavlovsk-Kamchatskiy Area	E-class SSGN	3		
	G-class SSB		2	
	Chumikan-class AGM	1		
Vladivostok	Siber-class AGM	3		
Olenya Guba Submarine Base	G-class SSB	4		
Polyarnyy Naval Base	G-class SSB	2		
Sayda-Guba Submarine Base	Z-Conversion-class SSB	1		
	G-class SSB	3		
	Longbin-class SSG			2

In addition to the above, there are 84 other submarines identified in 10 locations. For additional details, see Section I.

SECTION II

THIS SECTION PROVIDES A LISTING OF THOSE TARGETS WHICH REFLECT NO CHANGE IN FACILITIES FROM PREVIOUS TARGET DESCRIPTION. THE MISSION NUMBER SHOWN ON THE PHOTO REFERENCE LINE (E.G., NAC 9000) REFERS TO THE MCI WHICH CONTAINS THE MOST ADEQUATE DESCRIPTION OF THAT TARGET. MILITARY INSTALLATIONS WHERE NO ORDER OF BATTLE CAN BE DETERMINED ARE LISTED UNDER THIS SECTION.

APPENDIX

EXPLANATION OF COLUMN HEADINGS AND PHOTO REFERENCES

COLUMN HEADINGS

Target -- This column contains the name of the target. If the actual name is unknown, a name is assigned consisting of the name of the city or town closest to the target followed by a description of the target's function. Where appropriate, the target name is followed by a capsule description. Target numbers assigned by the Committee on Overhead Reconnaissance (COMOR), when available, are listed directly above the photo reference data.

Coordinates -- Coordinates are referenced to the SW corner of the minute square. When the target covers a wide area, coordinates are given for its approximate center.

WAC -- This column provides the number for the World Aeronautical Chart covering the target area.

Target Numbers -- This column is divided into two sub-columns. The first subcolumn lists, when known, the Bombing Encyclopedia (BE) number assigned to the target. The second subcolumn lists the target number assigned by NPIC. Target numbers, when used to reference an item, are prefixed by the WAC number of the chart on which the target appears.

PHOTO REFERENCE DATA

The photo reference line, or lines, provides the pass number, frame numbers, index numbers, and best-frame grid (Universal Grid No 1, February 1964) coordinates for the target in question. In addition, conditions which affect the appearance of the target on photography are given. For example:

frame numbers and 21 and 22 the index numbers. The grid coordinates (55-5) refer to the index number immediately preceding and are x and y coordinates for locating the target on the photography at the referenced index number. C indicates that the target was clear. Symbols used to indicate conditions which affect the appearance of the target on the photography are as follows: C (clear); SC (scattered cloud cover); HC (heavy cloud cover); H (haze); CS (cloud shadow); SD (semidarkness); O (obliquity); S (snow); and, PQ (poor image quality).
